

Final 15/16 - 1st

Exercise 1:
~~~~~

1. c / 2. d / 3. a / 4.  
5. a,d / 6. b / 7. d / 8. a

Exercise 2:  
~~~~~

1. T / 2. F / 3. T / 4. F / 5. F / 6. F
7. T / 8. F / 9. F / 10. T / 11. F / 12. T

Exercise 3:
~~~~~

- a → 3      b → 6      c → 1  
d → 2      e → 5      f → 4

## Exercise 4:

a)

| Level | count | pdf     | cdf     | $\text{round}((\text{Level}-1) * \text{cdf})$ |
|-------|-------|---------|---------|-----------------------------------------------|
| 0     | 34    | 0.00207 | 0.00207 | 0                                             |
| 1     | 50    | 0.00305 | 0.00512 | 0                                             |
| 2     | 500   | 0.03052 | 0.03564 | 0                                             |
| 3     | 1500  | 0.9155  | 0.12719 | 1                                             |
| 4     | 2700  | 0.16479 | 0.29198 | 2                                             |
| 5     | 4500  | 0.27465 | 0.56663 | 4                                             |
| 6     | 4000  | 0.24414 | 0.81077 | 6                                             |
| 7     | 3100  | 0.18921 | 1       | 7                                             |
| Total | 16384 |         |         |                                               |

Level 0: 584

Level 1: 1500

b) it will remain the same

Level 2: 2700

Level 3: 0

Level 4: 4500

Level 5: 0

Level 6: 4000

Level 7: 3100

## Exercise 5:

a)

|    |   |    |    |    |
|----|---|----|----|----|
| 13 | 0 | 13 | 6  | 8  |
| 0  | 0 | 4  | 7  | 9  |
| 14 | 0 | 7  | 3  | 12 |
| 0  | 9 | 9  | 6  | 1  |
| 8  | 5 | 15 | 11 | 4  |

|    |    |    |
|----|----|----|
| -1 | -2 | -1 |
| 0  | 0  | 0  |
| 1  | 2  | 1  |

Horizontal

|    |   |   |
|----|---|---|
| -1 | 0 | 1 |
| -2 | 0 | 2 |
| -1 | 0 | 1 |

Vertical

$$\text{Horizontal: } (0 \times (-1)) + (4 \times (-2)) + \dots = 18$$

vertical: 10

$$\text{Magnitude} = 10 + 18 = 28$$

b) 0 0 3 4 6 7 7 9 9

We replace 7 with 6

c) غير مطلوب

```

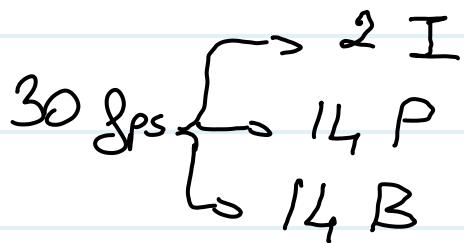

● ● ●
1 def apply_median_filter(image, kernel_size):
2     rows, cols = image.shape
3     pad_width = kernel_size // 2
4
5     padded_image = np.pad(image, pad_width, mode='edge')
6
7     output_image = np.zeros_like(image)
8
9     for i in range(rows):
10         for j in range(cols):
11             window = padded_image[i : i + kernel_size, j : j + kernel_size]
12             median_value = np.median(window)
13             output_image[i, j] = median_value
14
15     return output_image

```

## Exercise 6:

~~~~~

H.263 uses 4:2:2 subsampling, so 16 bits per pixel.

$$\text{frame size} = 704 \times 576 \times 16 = 6488064 \text{ bits}$$

$$\hookrightarrow \left(2 \times \frac{50}{10} + 14 \times \frac{50}{20} + 14 \times \frac{50}{40} \right) \rightarrow \text{size for } \underline{1 \text{ sec}}$$

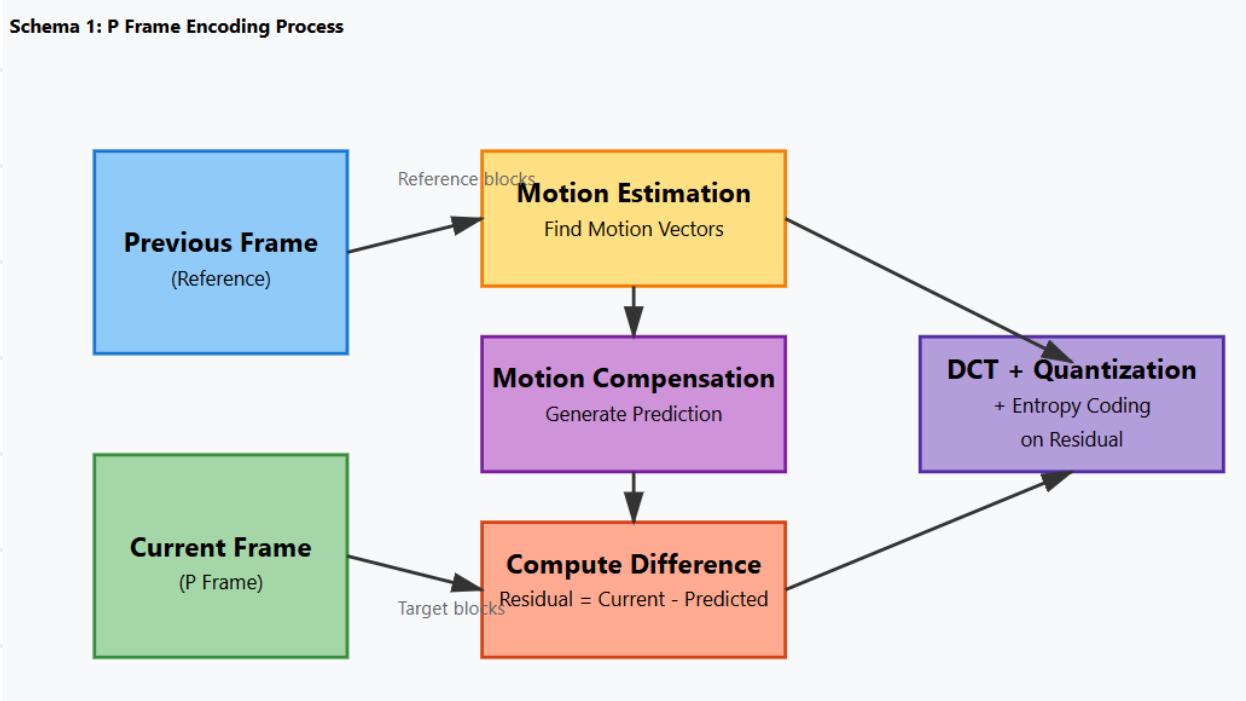

↳ 10:1 ↳ twice as ↓ ↳ twice as ↑

$$2110080 \times 90 \times 60 = 43794432000 \text{ bits} \approx 5.098 \text{ GBytes}$$

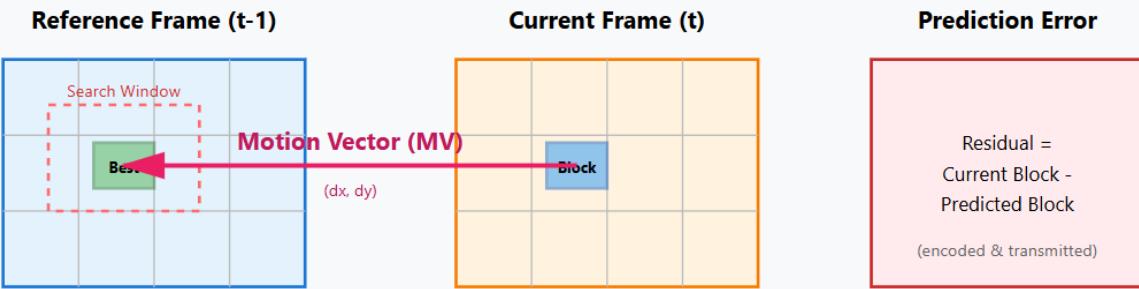

Exercise 7:

~~~~~

a)

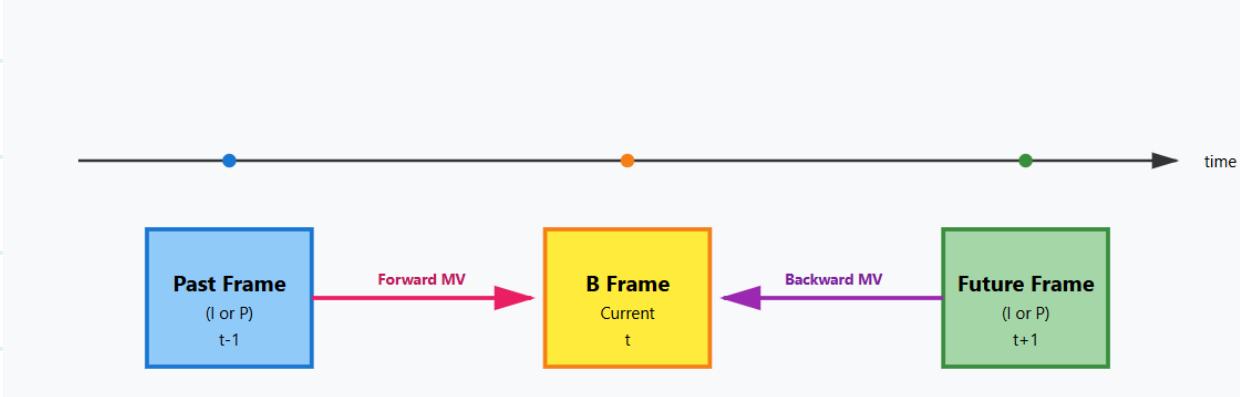

**Schema 2: Motion Compensation & Estimation Process (Detailed)**

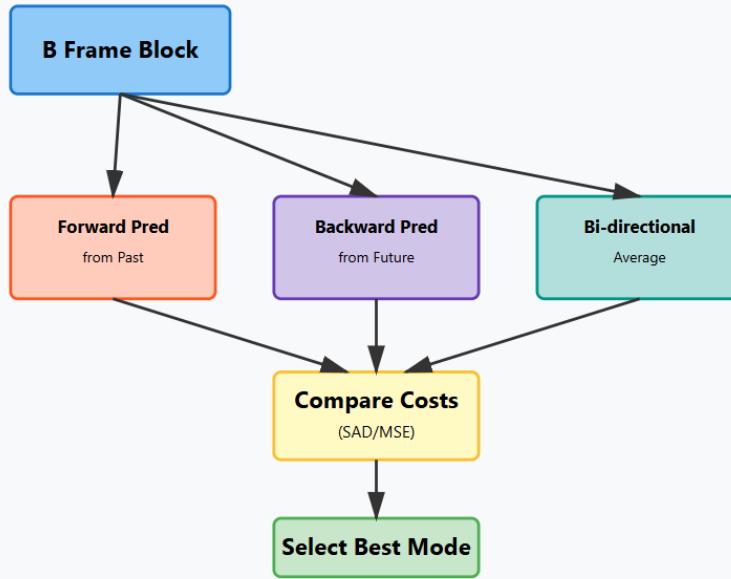

b)

**Schema 3: B Frame Encoding with Bidirectional Prediction**

**Schema 4: Adapted Motion Compensation for B Frames**

c)

### Schema 5: 2D Logarithmic Search Algorithm
